1997 - 2002 Average Annual Weekday Volumes

Traffic Volumes Listed

The attached listing includes traffic counts obtained with automatic traffic recorders over the past six years. The volume shown is a total of all vehicles* in both directions, over a 24 hour period, for a typical weekday in a year. Volumes shown as a dash "-" indicate no count was undertaken that year. Details of individual counts by direction and time of day are available on request.

* Vehicle volumes are in fact, derived from a count of axles divided by two with no adjustments for multi axle trucks. Thus the volume shown represents a count of 2 axle auto equivalent vehicles. Trucks are restricted in their movements, ranging from very low numbers on all roadways which are non truck route, 2% to 5% on 24 Hour (non DGR) truck route, 5% to 10% on 24 Hour truck route in industrial areas, and 5% to an excess of 10% on DGR route.

Seasonal Adjustments

Volumes are based on counts of one or two day duration and are adjusted to reflect an average weekday during the year. Adjustments are based on variations by time of year measured at permanent count locations that monitor traffic year round. Variation during the count season is typically ± 6% of the average. Presently, seasonal factors are based on total river crossings. Although seasonal factors represent a general variation through out the year, localised conditions or anomalies (school closures, shopping centres, roadways acting like highways) may not be adjusted appropriately by the factor. **Table 1** lists the factor used in 2002.

Year to Year Volume Changes - Interpretation of Results

An increase or decrease in volume does not necessarily indicate a trend for a given roadway. Some areas may record a temporary change in volume due to the reconstruction of a roadway link. Although every attempt is made to avoid counting areas while diversions are in effect, some roadway projects affect traffic patterns for a long period of time and are reflected in the counts. One example of this is the construction of Anthony Henday Drive Extension - Yellowhead Trail to Whitemud Drive, during which adjacent roadways such as Stony Plain Road west of Anthony Henday Drive decreased in volume three years in succession, 1999 - 2001.

When more than one count for a location is done in any year, the counts will usually be included and averaged in this summary. Two exceptions to this are when the counts are collected before and after implementation of significant operational or construction projects. When operational changes such as road closure, diversions, or implementation of a one way occur, the after counts only will be included. These types of changes usually affect local areas and all links affected will be counted and included. When new arterial links are constructed, larger areas may be influenced. In this case, the time of opening will determine whether the before or after situation will be represented. Our counts are conducted between April and October. As construction projects usually open in late fall, the before counts will normally be represented.

All data has been reviewed to ensure consistency with the current methodology. Although it is the most current version, the information may be updated without notice.

Summary of 2002 Volumes

Total river crossings are monitored year around and are used to measure trends. In **2002** the average weekday total river crossings decreased moderately by 2.2%. The decrease is a direct result of significant loss in volume on Capilano Bridge and minor loss in volume on James MacDonald Bridge due to major construction projects. Both bridges were affected by partial closure of Capilano Bridge lanes, closure of the northbound access ramp to Wayne Gretzky Drive from 106 Avenue, and complete closure and reconstruction of River Valley Road. The decrease is offset primarily by increases on Dawson, Low Level, and Clover Bar Bridges. Clover Bar Bridge increase, in combination with significant increases on Highway 16 East and Highway 216 and decreases on arterials approaching Capilano/75 Street corridor suggest vehicles circumvent the construction by using the East Outer Ring Road.

The Inner Ring Road Loop (Yellowhead Trail, 170 Street, Whitemud Drive, 75 Street) show continued volume increases with the exception of 75 Street, affected by Capilano Bridge construction. The most significant increases are on the most easterly and westerly section of Yellowhead Trail and Whitemud Drive (east of 50 Street). The busiest river crossing is Quesnell Bridge, averaging 113,100 vehicles per day, an increase of 1.3% from the previous year.

The most rapid growth in major roadways is on Anthony Henday Drive and on both the west leg within the City of Edmonton and the section of Highway 216 in the County of Strathcona. Of the major highway connections, significant growth is noted on Yellowhead Trail, Gateway Boulevard, Highway16A West and Highway 2 north of St.Albert Trail.

Generally, increases are noted along the majority of the suburban arterial roadways in both residential and industrial areas. Overall, changes in volume are a result of continued strong economic and industrial growth in the province for the past year.

In the NE, significant increases in volume along Manning Drive, 50 Street, 97 Street, Victoria Trail and Yellowhead Trail are primarily the result of new neighbourhood developments north of 137 Avenue and 153 Avenue, along with the completion of the new Wal-Mart store on 137 Avenue.

In the NW, significant increases in volume occur along 127 Street, St.Albert Trail, 184 Street, and Yellowhead Trail. Increases in this section of the city are the result of new residential development east of St. Albert Trail and west of 127 Street, and new industrial developments in the north west. Major commuter traffic routes from St.Albert show increased flows.

In the south, significant increases along Ellerslie Road and 23 Avenue from Terwillegar Drive to 34 Street and the most easterly portion of Whitemud Drive, as well as Highway 14, imply an increased use of the outer ring road. Contributing to the increase is the expansion of the South Edmonton Common commercial area, road improvements along 23 Avenue and the development of new residential neighbourhoods in SE and SW Edmonton.

1997 - 2002 Average Annual Weekday Volumes

In the Central Business District (CBD), moderate increases in volume on the west periphery roadways of 109 Street, Kingsway Avenue, 104 Avenue as well as the adjacent outer roadway of 116 Street, is a result of continuing development of commercial and residential areas adjacent to the west portion of downtown.

Major road construction projects carried out during the year have temporarily shifted the traffic patterns in several areas of the city. Although counts are generally staged to avoid construction impacts, extended construction schedules have impacted both the roadways under construction and alternate routes (River Valley Road, 142 Street / MacKenzie Bridge and 167 Avenue west of 112 Street).

Substantial increases in volume along the triad of St.Albert Trail, 131 Avenue, and Yellowhead Trail may be a result of the signal light installation at 131Avenue allowing back road access to the new community of Dunvegan east of St.Albert Trail.

Historical Volumes

In **2001** the average weekday total river crossings increased minimally by 0.9%. Although the majority of river crossings increased in volume, Groat Bridge and 105 Street Bridge decreased. Both bridges were adjacent to major venues of the 2001 World Games in August and may reflect the use of alternate routes established by vehicles during congestion and temporary closures prior to and during the World Games. The busiest river crossing is Quesnell Bridge, averaging 111,900 vehicles per day, an increase of 1.2% from the previous year.

Generally, increases occur along the majority of the outer arterial roadways. Overall, changes in volume are the result of strong economic and industrial growth in the province for the past year and temporary shifts in traffic patterns established by drivers during major road construction and road rehabilitation projects.

In the NE, significant increases in volume on 50 Street and on Yellowhead Trail are primarily the result of commercial development on 50 Street, residential expansion north of 153 Avenue and a rise in commuter traffic of neighbouring communities. Contributing to this growth is the completion of the new Clover Bar Bridge and the persistence of strong economic and industrial development in the province.

In the NW, significant increases in volume occur on St. Albert Trail, Yellowhead Trail, 137 Avenue, 170 Street and 156 Street. Increases in this section of the city reflect the growth of commercial development along 137 Avenue and St. Albert Trail, residential development west of 127 Street, as well as rising commuter traffic due to strong economic and industrial growth in the province. A significant increase in volume on 215 Street and on Yellowhead Trail east of 215 Street is a direct result of a shift in traffic pattern due to the closure of the median on Yellowhead Trail at 231 Street.

In the SW, the construction of a four-lane divided roadway extending Anthony Henday Drive from Whitemud Drive to 45 Avenue was completed in July. Significant decreases in volume on 170 Street south of 100 Avenue, offset by substantial increases in volume on Anthony Henday Drive, suggest a shift in travel patterns away from the Inner Ring Road, to a less congested Outer Ring Loop in this sector.

In south, significant increases in volume along Whitemud Drive from 75 Street in the east, to 170 Street in the west, continue to reflect the use of the Inner Ring Road as a preferred route to transverse the city. Major increases on 23 Avenue from 17 Street in the east to Terwillegar Drive in the west accommodate commercial development in South Edmonton Common and residential growth in the Terwillegar area.

In thc Central Business District, significant increases in volume on the west periphery roadways of 104 Avenue and 109 Street is a direct result of the redevelopment of the CPR right of wa, contributing to commercial and residential growth in Oliver Square area. Moderate increases on the remaining outer roadways, offset by minor decreases on most of the inner roadways, suggest drivers continue to use the peripheral roads of the CBD after the conversion of one way roads to two way roads.

1997 - 2002 Average Annual Weekday Volumes

Major construction projects carried out during the year have temporarily shifted the traffic pattern in the several areas of the city.

Road widening of 97 Street (186 Avenue to 37 Avenue) to a six-lane divided roadway was completed in October. Although counts in the NE were taken after the completion of the construction, significant decreases in volume on the periphery of 97 Street, offset by significant increases on 82 Street suggest drivers continue to use the alternate routes established during the construction period.

Construction of the grade-separated interchange at Calgary Trail and Ellerslie Road under went various stages of completion during the year, fully opening to traffic in October. Even though counts in this area were conducted in the early spring and late fall, decreases on the periphery of Calgary Trail, off set by significant increases on 91 Street and 50 Street suggest drivers prefer the alternate routes established during construction period.

In **2000** the average weekday total river crossings increased moderately by 3.8 %. Generally, increases occur on most of the outer arterial roadway systems with the exception of Sherwood Park Freeway in the east, Stony Plain Road in the west, and 184 Street, 170 Street and St Albert Trail in the north. Significant increases on the peripheries of three major outer arterial roadways: Whitemud Drive, Calgary Trail, and south portion of Anthony Henday Drive, off set by moderate decreases along several inner arterial roadways: 34 Street and 75 Street in the east, Stony Plain Road and 100 Avenue in the west, 184 Street and 170 Street in the north, suggest a shift in travel patterns to the outer ring corridor.

In the NE significant increases along 82 Street and 66 Street are a result of residential growth north of 153 Avenue and 167 Avenue. In the NW significant increases along 156 Street and 167 Avenue are a direct result of the installation of a new traffic control at the intersection of 167 Avenue and Campbell Road and a change in driver's travel patterns away from 142 Street, St. Albert Trail and 170 Street.

In the SW, significant increases on Whitemud Drive and Anthony Henday Drive along with moderate increases along the west portion of Yellowhead Trail are a direct result of the completion of Anthony Henday Drive extension to Yellowhead Trail. In the SE significant increases on Calgary Trail and Whitemud Drive, off set by significant decreases on 34 Street and moderate decreases on 50 Street are a result of travel pattern changes generated by the completion of the Whitemud Drive extension to Highway 14. Significant increases in traffic on 91 Street, as well as moderate increase on 83 Street are possibly a result of a change in driver's travel pattern away from congested conditions on and surrounding 99 Street roadway construction.

In the Central Business District, significant decreases in volume on the peripheries of inner roadways; 103 Avenue and the 2way converted roadways of 102 Avenue and 102A Avenue, off set by moderate increases along outer roadways; 109 Street to the west, 97 Avenue to the south, and 104 Avenue and 97 Street to the north, suggest drivers are skirting the CBD to avoid the downtown. This shift in travel pattern is a direct result of the removal of the overpass at 109 Street and at 101 Street and changes to traffic signal timings to accommodate the downtown conversion of one way roads to two way roads.

1997 - 2002 Average Annual Weekday Volumes

Construction and road closures related to the demolition of the 109 Street "Rathole" underpass and replacement with a six-lane at-grade intersection with 104 Avenue, as well as the rehabilitation of 109 Street (97 Avenue to 107 Avenue) was completed in September. Intersection improvements of 104 Avenue and 116 Street and road widening from 116 Street to 118 Street was completed in October. Traffic volumes in and surrounding the Central Business District reflect counts taken after the completion of these projects.

Road widening of 99 Street (67 Avenue to 81 Avenue) to a four-lane divided roadway, with left-turn bays and a raised median was completed in November. Road rehabilitation and paving of 75 Street (Argyll to Whitemud Drive), as well as the resurfacing of Calgary Trail in both directions (city limits to 51 Avenue) were completed in August. Traffic volumes in the SE include counts before and after the completion of these projects.

Road closures and construction related to intersection improvements at 87 Avenue and 149 Street, road realignment on Stony Plain Road (142 Street to 149 Street), as well as neighbourhood traffic calming implementation west of 142 Street and south of 95 Avenue were completed in September. Traffic volumes in the SW reflect counts taken before and after the completion of these projects.

Final paving of Anthony Henday Drive extension to Yellowhead Drive was completed in July. Road closures and construction related to detour alignment of 184 Street at Yellowhead Trail was completed in October. Traffic volumes in the NW reflect counts taken before and after completion of these projects.

Lane closures and detours related to the construction of a new three lane bridge replacing the existing Cloverbar Bridge westbound was started in June as part of a two year project. Traffic volumes in the NE include counts prior to the start of this project.

In **1999** the average weekday total river crossings increased minimally by 0.5%. Generally, increases occur on most of the outer arterial roadway systems with the exception of Sherwood Park Freeway in the east and Stony Plain Road in the west. Significant increases on the peripheries of the three major outer arterial roadways: Yellowhead Trail, Whitemud Drive and Anthony Henday Drive, off set by substantial decreases along several inner arterial roadways: Stony Plain Road, 170 Street, 149 Street in the west and Sherwood Park Freeway, 50 Street and 75 Street in the east, suggests a shift in travel pattern to the outer ring road corridor. In the NE, significant increases on 50 Street, 66 Street and 82 Street are generated by commercial developments on 137 Avenue and Manning Drive, the completion of the 50 street overpass at Yellowhead Trail and possibly changes in driver's travel route patterns away from 97 Street. In the NW, significant increases along 184 Street, Anthony Henday Drive, and the west segment of Yellowhead Trail are a direct result of the completion of Anthony Henday Drive extension to Yellowhead Trail in 1998. In the Central Business District, a shift in traffic away from 102 A Avenue,105 Street and 106 Street towards Jasper Avenue and 102 Avenue is a direct result of the 2 way conversion in 1998. Significant increases in traffic volume on Jasper Avenue east of 97 Street and on 101 Street north of 104 Avenue, combined with minor increases on most access roads into the downtown, reflects the economic growth the City of Edmonton is experiencing.

Construction and road closures related to the demolition of the 101 Street Bridge at 104 Avenue and the building of a retaining wall on the west side of 105 Street south of 99 Avenue was completed in September. Road rehabilitation and streetscaping on 104 Avenue west of 109 Street, on 104 Street south of 103 Avenue, on 107 Avenue west of 101 Street and on 124 Street south of 111 Avenue was completed in October. Traffic volumes in and surrounding the Central Business District reflect counts taken after the completion of these projects.

Road rehabilitation on 156 Street north of Yellowhead Trail, as well as the construction and realignment of the intersection on Yellowhead Trail at 231 Street was completed by September. Traffic volumes in the NW include counts before and after the completion of these projects.

Construction and lane closures related to road rehabilitation on 87 Avenue from 109 Street to Groat Road, as well as the extension of the bike path on Groat Road from River Valley Road to 107Avenue was completed in October. Traffic volumes in and surrounding the University of Alberta reflect counts taken after the completion of these projects.

In **1998** the average weekday total river crossings increased by 7.6%, the highest increase in 20 years. Generally, increases occur on most of the outer arterial roadway systems. In the NE, significant increases along 50 Street are generated by new growth of commercial development on 137 Avenue and Manning Drive and by the completion of the 50 Street overpass at Yellowhead Trail. Volumes along Yellowhead Trail continue to increase, moderately in the east and significantly in the west. Significant increases on Sherwood Park Freeway and Whitemud Drive in the SE, joined by 23 Avenue to the south and Terwillegar Drive, 149 Street, 178 Street and Stony Plain Road to the NW, suggest a circuitous travel pattern utilizing city's arterial roadway system.

Construction and road closures related to rehabilitation of 97 Street south of 107 Avenue and unexpected slide repair on Victoria Park Hill Road and Bellamy Hill Road was completed by mid October. The downtown conversion of one way roads to two way roads was completed August 30, 1998. Traffic volumes in and surrounding the Central Business District reflect counts taken after the completion of these projects.

The construction of the Whitemud Drive extension to 17 Street, as well as road rehabilitation of 17 Street and Sherwood Park Freeway was completed in October. Traffic volumes in the SE include counts before and after the completion of these projects.

Construction of Anthony Henday Drive extension to Yellowhead Trail was completed in October. Although traffic counts in the NW were carried out during and after the completion of this project, volumes on Anthony Henday Drive and adjoining roads reflect the after situation.

1997 - 2002 Average Annual Weekday Volumes

In **1997** the average weekday total river crossing increased by 2.3%, after two consecutive years of minimal or no change. General increases occurred on most arterial roadways, with significant increases exceeding 10% on Whitemud Drive and Yellowhead Trail. Traffic volumes on most main routes in and out of the city increased as well, exceeding increases of 10% on Highway 2 South and Highway 28. These increases, reflect the economic growth the City of Edmonton was experiencing.

Due to several major construction projects affecting travel patterns city wide, the 1997 regular traffic count program was carried out in the months prior to mid July and after mid August. Road rehabilitation on 107 Avenue, 82 Street, 112 Avenue, as well as LRT rehabilitation on Jasper Avenue and 99 Street were completed by mid September. Total and partial road closures, related to sewer construction on 97 Street and bridge overpass construction on Scona Road, reopened in mid October. Traffic volumes on roadways feeding into the Central Business District and at all river crossings, reflect counts after the completion of these construction projects. Although a substantial change in volume is present on 97 Street and at several river crossings, it does not necessarily indicate a trend. Motorists, forced to use alternate routes during the construction period, either used new routes or had not returned to their normal route.

Traffic counts in the NE were carried out after the reopening of 50 Street between Manning Drive and 144 Avenue at the end of September. In the SE, traffic counts were carried out while roadway construction was in progress at Whitemud Drive on 34 Street and on 17 Street.

Table 1: 2002 Traffic Variation
